

SECURING ENERGY

In today's age of turmoil, energy facilities are becoming increasingly vulnerable to sabotage and even targeted by criminal activity. The growing uncertainty of terrorism and random crime makes protecting energy supply a top priority for the industry.

At Betafence, our commitment is to provide proven solutions to protect critical facilities with our hardened perimeter fencing systems that control access, and deter, detect, delay and even defend against physical attacks.

Strong perimeter defence is the first and most important step in preparing for the unknown. Our strength lies in our integrated approach to security solutions, and we specialise in high security, wide-area and remote location perimeter protection fencing systems.
